

- **inner join in table:-**

```
SELECT PARENT_TABLE.STUDENT_NAME, PARENT_TABLE.ROLL_NO FROM PARENT_TABLE
INNER JOIN CHILD_TABLE
ON CHILD_TABLE.STUDENT_NAME = PARENT_TABLE.NAME;
```

(will 'inner join' child table selected columns to parent table column and create a view of table with selected column (only middle rows)) (same with right, left joins)

- **Full join in table:-**

```
SELECT PARENT_TABLE.STUDENT_NAME, PARENT_TABLE.ROLL_NO, PARENT_TABLE.STUDENT_ID FROM
PARENT_TABLE
FULL JOIN CHILD_TABLE
ON CHILD_TABLE.STUDENT_NAME = PARENT_TABLE.STUDENT_NAME;
```

(will join child table selected columns to parent table column and create a view of table with selected column (all rows in the columns will be joined))
